Report Theme

“Built for Life, Designed for Tomorrow”

“Built for Life, Designed for Tomorrow” defines the dual responsibility Neoliv brings to every development to the people who will inhabit these spaces today, and to the broader world they are a part of tomorrow.

Built for Life reflects our approach to design: centred on people, not as a segment or a metric, but as individuals whose daily experience is meaningfully shaped by the quality of their environment. Designed for Tomorrow is the commitment we carry as we look ahead that our growth will remain guided by an awareness of what responsible development demands of us, environmentally and socially. At Neoliv, responsibility and ambition are not in tension. One is the measure of the other.

About This Report

This report presents NeoLiv's Environmental, Social and Governance (ESG) disclosures for FY 2025-26 and outlines the Company's approach to responsible growth, sustainable development and long-term value creation. It is intended to provide investors, partners, regulators, customers, communities and employees with a transparent overview of the material ESG themes relevant to the Company's business, strategy, operations and governance framework.

The report has been prepared with reference to the Global Reporting Initiative (GRI) Universal Standards 2021. It also reflects the Company's alignment with the United Nations Sustainable Development Goals (SDGs) on topics material to its business and stakeholders.

Scope and Boundaries

This report covers NeoLiv's organizational operations and residential real estate development activities across the National Capital Region (NCR) and Mumbai Metropolitan Region (MMR), including key offices where the Company has operational oversight. The reporting boundary includes both corporate office functions and on-ground project implementation, with disclosures focused on material ESG aspects relevant to the Company's business model, strategy and stakeholder expectations.

Unless stated otherwise, all quantitative information presented in this report relates to the period from 1 April 2025 to 31 March 2026 and covers entities, functions and projects over which the Company has operational or management oversight. Where relevant and available, comparative information from prior periods has been included to enable a clearer assessment of progress over time.

Forward-looking Statements

This report may contain forward-looking statements relating to the Company's ESG goals, strategies, initiatives and future business performance. These statements are based on current expectations, assumptions and estimates, including those regarding project timelines, regulatory developments, market conditions and access to technology and

finance. Forward-looking statements are inherently subject to known and unknown risks and uncertainties, and actual outcomes may differ materially from those expressed or implied. The Company does not undertake any obligation to update such statements publicly, except as required under applicable laws and regulations.

Corporate Overview

About NeoLiv

NeoLiv is reshaping modern residential development by placing sustainability at the core of its business strategy. Established in January 2023, the Company is focused on delivering high-quality, sustainable and aspirational homes backed by institutional-grade governance and financial discipline.

With a leadership team that has collectively delivered over 30,000 homes and managed assets worth over USD 1.5 billion across India, NeoLiv brings together deep sector expertise with a progressive approach to responsible urban development. Its leadership drives a vision that goes beyond construction creating long-term value through responsible planning, efficient resource use and sustainable urban growth.

This Sustainability Report is anchored in NeoLiv’s theme, “Built for Life, Designed for Tomorrow”, reflecting the Company’s commitment to creating living environments that are meaningful for people today while being responsible and resilient for the world of tomorrow.

Business Model

NeoLiv operates through an integrated development platform that spans the full residential real estate value chain from land acquisition and design through construction, sales and customer handover. By combining strong governance, digital innovation, lean management practices and sustainability-focused development, the Company enhances operational efficiency while delivering consistent value to customers and stakeholders. This integrated approach underpins NeoLiv’s philosophy of being “Built for Life, Designed for Tomorrow”, ensuring that each project is conceived and executed to meet present-day customer needs while remaining resilient, efficient and future-ready.

Corporate Structure

NeoLiv conducts its operations through its parent entity and special purpose vehicles (SPVs), ensuring financial transparency and effective governance. The Company is structured around an integrated model that includes a regulated fund management arm and a project development arm, ensuring alignment between capital deployment and project execution. Internal controls and board-level governance guide all major decisions, supporting accountability, efficiency and structured execution.

Vision

To be the most trusted and admired residential living platform, transforming urban housing experiences in India.

Mission

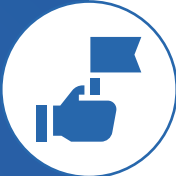

To deliver high-quality, sustainable and thoughtfully designed homes that enable better lives and stronger communities.

Core Values

Customer-Centricity

A customer-first approach with emphasis on thoughtful design, wellness, community experience and end-user satisfaction.

Strategic leadership, robust corporate governance and compliance-driven operations.

Sustainability

Green design, efficient resource utilisation and ESG integration across all business decisions.

Technology Enablement

Smart project management systems, digital platforms and technology-led construction management.

ESG Highlights FY 2025-26

The table below presents NeoLiv’s key ESG performance metrics for FY 2025-26, compared against the FY 2024-25 base year. The environmental performance metrics cover our only operational asset in NCR region that accounts for 100% of our portfolio. Other relevant sites have not reached required level of construction activity to generate or consume any substantial disclosure.

Environment

	FY 2024-25	FY 2025-26
 Projects designed for IGBC pre-certification	100%	100%
 Total energy consumption	137.30 GJ	
 Total Scope 1 GHG emissions	5.94 tCO ₂ e	86.7 tCO ₂ e
 Total Scope 2 GHG emissions	11.63 tCO ₂ e	
 Sites in red zones / ecologically sensitive areas	ZERO	ZERO
 Total water consumption	1,025 KL	5,160.77 KL

Social

	FY 2024-25	FY 2025-26
 Female employees as % of total workforce	29%	32%
 Work-related injuries and fatalities	ZERO	ZERO
 Employee satisfaction survey participation	100%	100%

Governance

	FY 2024-25	FY 2025-26
 Non-compliance with laws and regulations	ZERO	ZERO
 Data breaches	ZERO	ZERO
 Non-compliance with Human Rights Policy	ZERO	ZERO

Note: Reported data may change following the publication of the assurance report.

NeoLiv tracks key ESG performance indicators covering energy consumption, greenhouse gas emissions, water use, waste management, health and safety, human capital and governance metrics. Selected environmental and social KPIs presented in this report were subjected to independent limited assurance upon finalisation of FY 2025–26 data.

Message From The CEO

Dear Stakeholders,

At NeoLiv, we believe that the future of residential development lies in creating communities that are thoughtfully designed, sustainable and people centric. As we present our ESG Report for FY 2025-26, we are proud to share the foundations we have laid to integrate environmental, social and governance principles into the way we operate, grow and create long-term value.

Guided by our philosophy of being “Built for Life, Designed for Tomorrow”, we are focused on creating living environments that serve our residents today while remaining resilient and responsible for the future.

For us, sustainability is not a parallel initiative it is embedded in how we design, build and deliver our projects. The built environment has a profound influence on people, communities and the planet, and this understanding drives our commitment to developing homes and ecosystems that promote well-being, resilience, safety and environmental responsibility.

During the year, we undertook a comprehensive materiality assessment to better understand and prioritise the ESG issues most significant to our stakeholders and our business. This process reaffirmed climate strategy, governance and ethics, risk management, resource efficiency,

worker health and safety, customer experience and community impact as key priorities shaping our ESG roadmap and decision-making framework.

On the environmental front, we are focused on embedding sustainable and resource-efficient practices across the development lifecycle from planning and design to construction and operations. All common amenities infrastructure under developer’s purview initiated during FY 2025-26 are being designed with the intent of pursuing green building certifications, reinforcing our commitment to making sustainable development a core business standard. We are also strengthening our approach to monitoring and managing energy consumption, greenhouse gas emissions, water use and waste management to build a more climate-conscious and resilient organisation.

Strong governance remains central to NeoLiv’s growth journey. As a professionally managed and institutionally backed platform, we are committed to maintaining high standards of ethics, transparency, accountability and compliance across our operations. We continue to enhance our practices in risk management, data privacy, information security and responsible business conduct.

Equally important is our commitment to the people and communities connected to

NeoLiv. We strive to maintain safe and healthy workplaces across all project sites and offices, while fostering a culture rooted in integrity, inclusion, collaboration and continuous learning. For our customers and communities, we remain focused on transparent communication, quality delivery and creating spaces that enhance social connection and long-term well-being.

As NeoLiv continues to grow, we recognise that our ESG journey is only beginning. In the years ahead, we will further strengthen our systems, deepen data-driven decision-making and establish more structured and measurable ESG targets aligned with evolving stakeholder expectations and global best practices.

I extend my sincere gratitude to our employees, partners, investors, customers and communities for their continued trust and support. Together, we will continue building responsibly and joyfully creating homes that people cherish, communities that thrive and a future that stands the test of time.

Warm regards,
Mohit Malhotra
Founder & CEO, NeoLiv

“
**Built for Life,
Designed for Tomorrow**
*we deliver sustainable
communities built to
the highest standards of
environmental stewardship,
resident wellbeing, and
long-term value.*”

Materiality Assessment

Stakeholder Engagement

NeoLiv recognises that active stakeholder engagement is central to creating long-term value and supporting sustainable organisational growth. Open communication and collaboration with all stakeholder groups help us build strong, accountable relationships and ensure that evolving expectations are integrated into our strategy and decision-making.

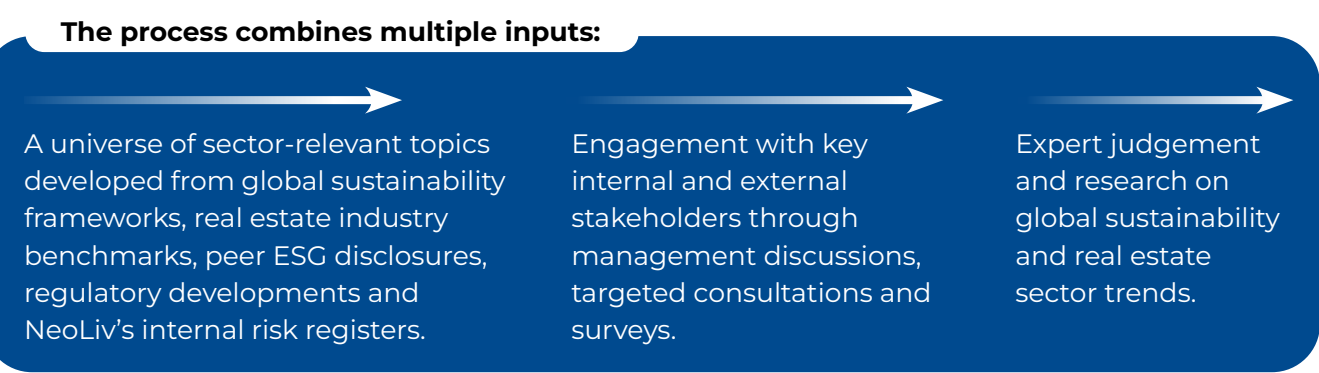

We engage stakeholders continuously through a structured six-step process designed to ensure broad and meaningful participation:

Why They Matter	Engagement Channels	
Investors & Lenders	Capital providers; key audiences for ESG disclosures and performance	Investor reporting, ESG disclosures, direct dialogue
		External
Customers / Homebuyers	End-users of our developments; drive product design and service quality expectations	CRM platforms, NPS surveys, site visits, grievance mechanisms
		External
Communities	Affected by construction activities and long-term asset impact	Consultations, community engagement programmes
		External
Value Chain Partners	Suppliers, vendors and contractors critical to project delivery and ESG performance	Supplier assessments, contractual ESG clauses, audits
		External
Regulatory Authorities	Compliance obligations across environmental, labour, safety and real estate regulations	Regulatory filings, inspections, compliance reporting
		External
Media	Influence public perception and ESG narrative	Press releases, ESG report publications
		Internal
Employees	Core workforce; drivers of culture, quality and operational performance	Town halls, surveys, HR portal, one-on-one interactions
		Internal
Contractors / Off-roll Workers	Essential for site delivery; critical from OHS and human rights perspectives	Toolbox talks, HSE training, site inductions, grievance channels

Materiality Assessment Process

NeoLiv conducts a structured materiality assessment on a periodic basis to identify and prioritise the ESG topics most significant to its impacts, strategy and enterprise value. The FY 2025-26 assessment reflects the latest developments in sustainability reporting practices and evolving stakeholder expectations. The approach applies a double materiality lens evaluating each topic from two perspectives: impact materiality, which considers NeoLiv's actual and potential positive and negative impacts on the economy, environment and people (including human rights); and financial materiality, which considers the extent to which ESG topics can influence the Company's business model, cash flows, risk profile and access to capital.

Each topic is scored based on the severity and likelihood of related impacts, as well as its potential to create risks or opportunities for NeoLiv's strategy, operations and reputation. The prioritisation is reviewed and validated by senior management, and the final set of material topics forms the basis for NeoLiv's ESG strategy, performance targets and disclosures.

Climate Strategy

1	Manages risks from physical and transition climate hazards; supports investor and lender expectations	↑	
---	---	---	---

Corporate Governance & Business Ethics

Our ESG Strategy

At NeoLiv, ESG is embedded into the way we plan, design and deliver residential communities, and forms an important lens for managing risks and opportunities across our business. Our strategy is informed by leading ESG practices and benchmarks for real estate, as well as the evolving expectations of investors, regulators, customers and communities.

Our ESG approach is anchored in three interconnected pillars Sustainable Living Spaces, Socially Responsible Development and Secure and Robust Governance - which reflect the material topics identified across environment, social and governance dimensions. These pillars collectively translate NeoLiv's philosophy of being "Built for Life, Designed for Tomorrow" into a structured framework for action, guiding

how climate and energy, operational eco efficiency, biodiversity, green building, employee engagement, health and safety, human rights, corporate governance and business ethics, risk management, and data privacy are integrated into our decision making

As NeoLiv's portfolio evolves, the Company intends to progressively enhance the quality and coverage of ESG data, deepen its understanding of climate-related and other sustainability risks, and strengthen engagement with residents, employees, suppliers and other stakeholders on relevant ESG topics. Implementation is supported by clearly defined focus areas under each pillar, functional responsibilities and management oversight through ESG-linked Key Result Areas (KRAs) and periodic reviews.

Our ESG Commitments & Progress FY 25-26

Pillar 1: Secure and Robust Governance

Commitment Area	Target / Action	Description	Progress in FY 25-26
Compliance Framework	Uphold zero tolerance towards non-compliance	Ensure the highest standards of ethical conduct across the organisation by fostering transparency, accountability and integrity in every action, building a values-driven culture that inspires stakeholder confidence.	Zero cases of non-compliance across functions.
Sustainable Procurement	At least 30% local sourcing from vendors and suppliers	Support regional economies, reduce transportation-related carbon emissions and promote responsible supply chain practices by prioritising local and eco-friendly materials.	Achieved 77% local sourcing of materials by value.
Data Security & Privacy	Guarantee 100% data security and privacy for all customers and stakeholders	Protect personal and transactional data through robust cybersecurity systems, ensuring confidentiality and privacy at every stakeholder interaction.	Zero data breaches reported in the current reporting cycle.

Pillar 2:
Sustainable Living Spaces

Commitment Area	Target / Action	Description	Progress in FY 25-26
Renewable Energy	At least 50% renewable energy in clubhouses and common areas	Integrate rooftop solar and other renewable solutions to reduce reliance on grid power and promote greener living environments.	Rooftop solar capacity of 40kWh under execution on the operational site.
Indoor Air Quality	100% alignment with AQI standards (PM2.5 and PM10)	Maintain optimal indoor air quality within all clubhouses using eco-friendly materials and monitoring systems.	Maintained 100% alignment with AQI standards
Water Conservation	100% recycled water for flushing and landscaping	Leverage treated water to reduce freshwater consumption and support sustainable landscaping across all project sites.	Maintained zero water discharge model with all the discharged water used for flushing and landscaping.
Rainwater Harvesting	Implement systems at all project locations	Recharge groundwater, reduce surface runoff and support water conservation especially during dry periods.	Maintaining water efficiency levels with zero discharge model and rainwater harvesting mechanisms

Commitment Area	Target / Action	Description	Progress in FY 25-26
Waste Management	Zero Waste to Landfill across all construction sites	Minimise landfill-bound waste through systematic segregation, recycling and responsible disposal practices.	Maintained zero waste to landfill on the operational site
Organic Waste Composting	Install composters at all project sites	Convert biodegradable waste into nutrient-rich compost for landscaping, supporting circular waste management.	Zero biodegradable waste generated at the operational site
Environmental Certification	ISO 14001 certification for every project site	Systematically manage environmental responsibilities and continuously improve sustainability performance.	EMS is aligned to ISO 14001 standard with official ISO 14001 certification planned
Native Plantation	100% native species across all project sites	Enhance ecological balance, support local wildlife and preserve the natural heritage of development locations.	Landscaping maintains 100% native species across operational site
Green Building Certification	All developments certified through IGBC, EDGE or LEED	Validate commitment to energy efficiency, resource conservation and healthier living spaces.	Operational site has received IGBC Platinum Pre-certification

Pillar 3:
Socially Responsible Development

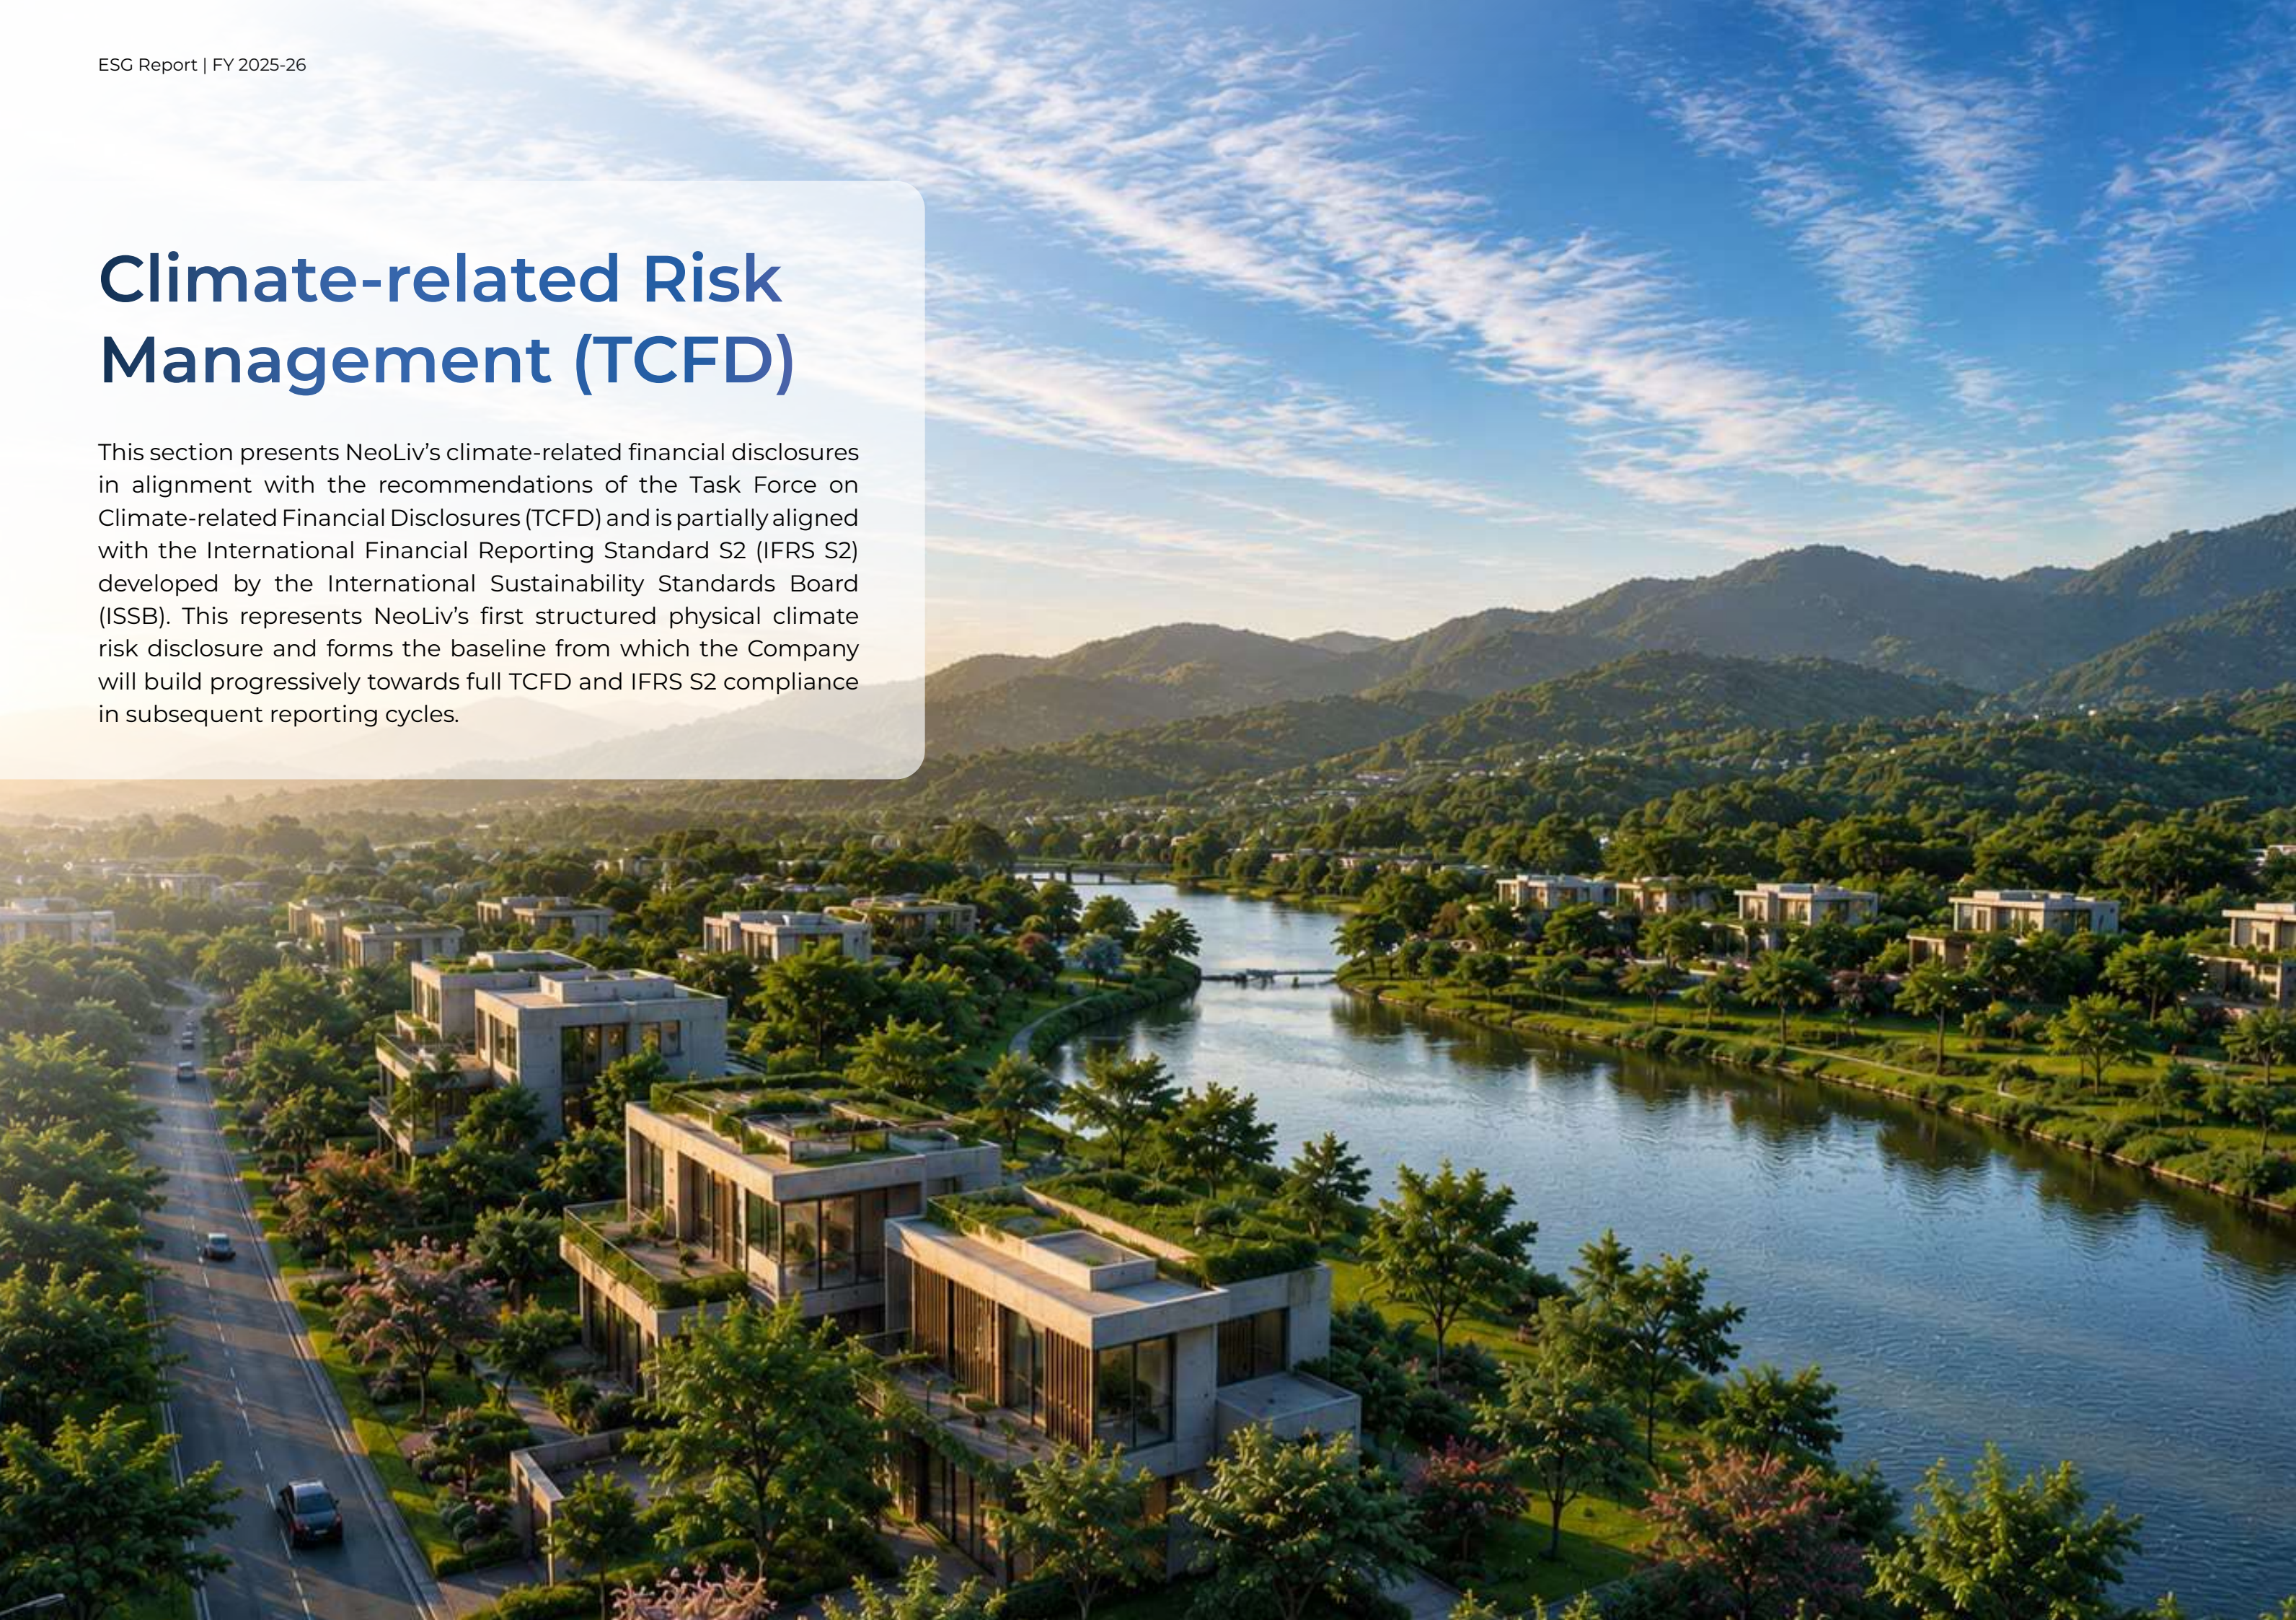

Commitment Area	Target / Action	Description	Progress in FY 25-26
Gender Diversity	Achieve 30% workforce diversity across the organisation	Foster an inclusive environment where a diverse workforce drives innovation and strengthens organisational culture.	Achieved 32% workforce diversity across organisation
Safety Standards	Maintain a zero-fatality record at all project sites	Protect every worker, contractor and visitor through embedding a culture of safety at all levels of operations.	Maintained zero injury and fatality record across all operations

Commitment Area	Target / Action	Description	Progress in FY 25-26
Human Rights	Zero tolerance for human rights violations	Uphold fair treatment, safe working conditions and ethical labour practices across operations and the value chain.	Maintain zero human rights violation status across operations
Customer Experience	Track and enhance experience through a Net Promoter Score (NPS) framework	Remain close to customer values of trust, transparency and service excellence in delivering homes of pride.	Achieved NPS score of 69 across 81 customers.

Climate-related Risk Management (TCFD)

This section presents NeoLiv's climate-related financial disclosures in alignment with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) and is partially aligned with the International Financial Reporting Standard S2 (IFRS S2) developed by the International Sustainability Standards Board (ISSB). This represents NeoLiv's first structured physical climate risk disclosure and forms the baseline from which the Company will build progressively towards full TCFD and IFRS S2 compliance in subsequent reporting cycles.

Governance

NeoLiv has established a formal three-tiered ESG governance structure to ensure that climate and sustainability considerations are embedded in core business decision-making.

Governance Level	Committee / Group	Meeting Frequency	Climate-related Responsibilities
Board Level	ESG Committee	Every 6 months	Strategic oversight of ESG priorities, climate risks and material sustainability matters; approval of climate-related policies and targets
Management Level	ESG Management Committee	Every quarter	Policy alignment, target-setting, performance monitoring and resource allocation for climate action; review of Climate Risk Assessment findings
Function Level	ESG Taskforce	Every month	On-ground data collection, compliance tracking and implementation of site-level climate measures; monthly climate hazard monitoring

ESG-linked performance parameters are incorporated into the Key Result Areas (KRAs) of senior management personnel, covering targets related to energy savings, waste reduction, safety performance and stakeholder satisfaction.

Strategy

NeoLiv’s standing investment portfolio spans two climatically distinct regions: the semi-arid, seismically active National Capital Region (Sonipat and Faridabad, Haryana) and the high-rainfall, cyclone-proximate coastal foothills of Maharashtra (Khopoli, Raigad district). Both regions are assessed separately to reflect their distinct hazard profiles, construction stages and regulatory contexts.

As a residential real estate developer and operator, NeoLiv’s primary climate exposure arises through physical risk the direct impacts of changing weather patterns and extreme events on built assets, site operations and

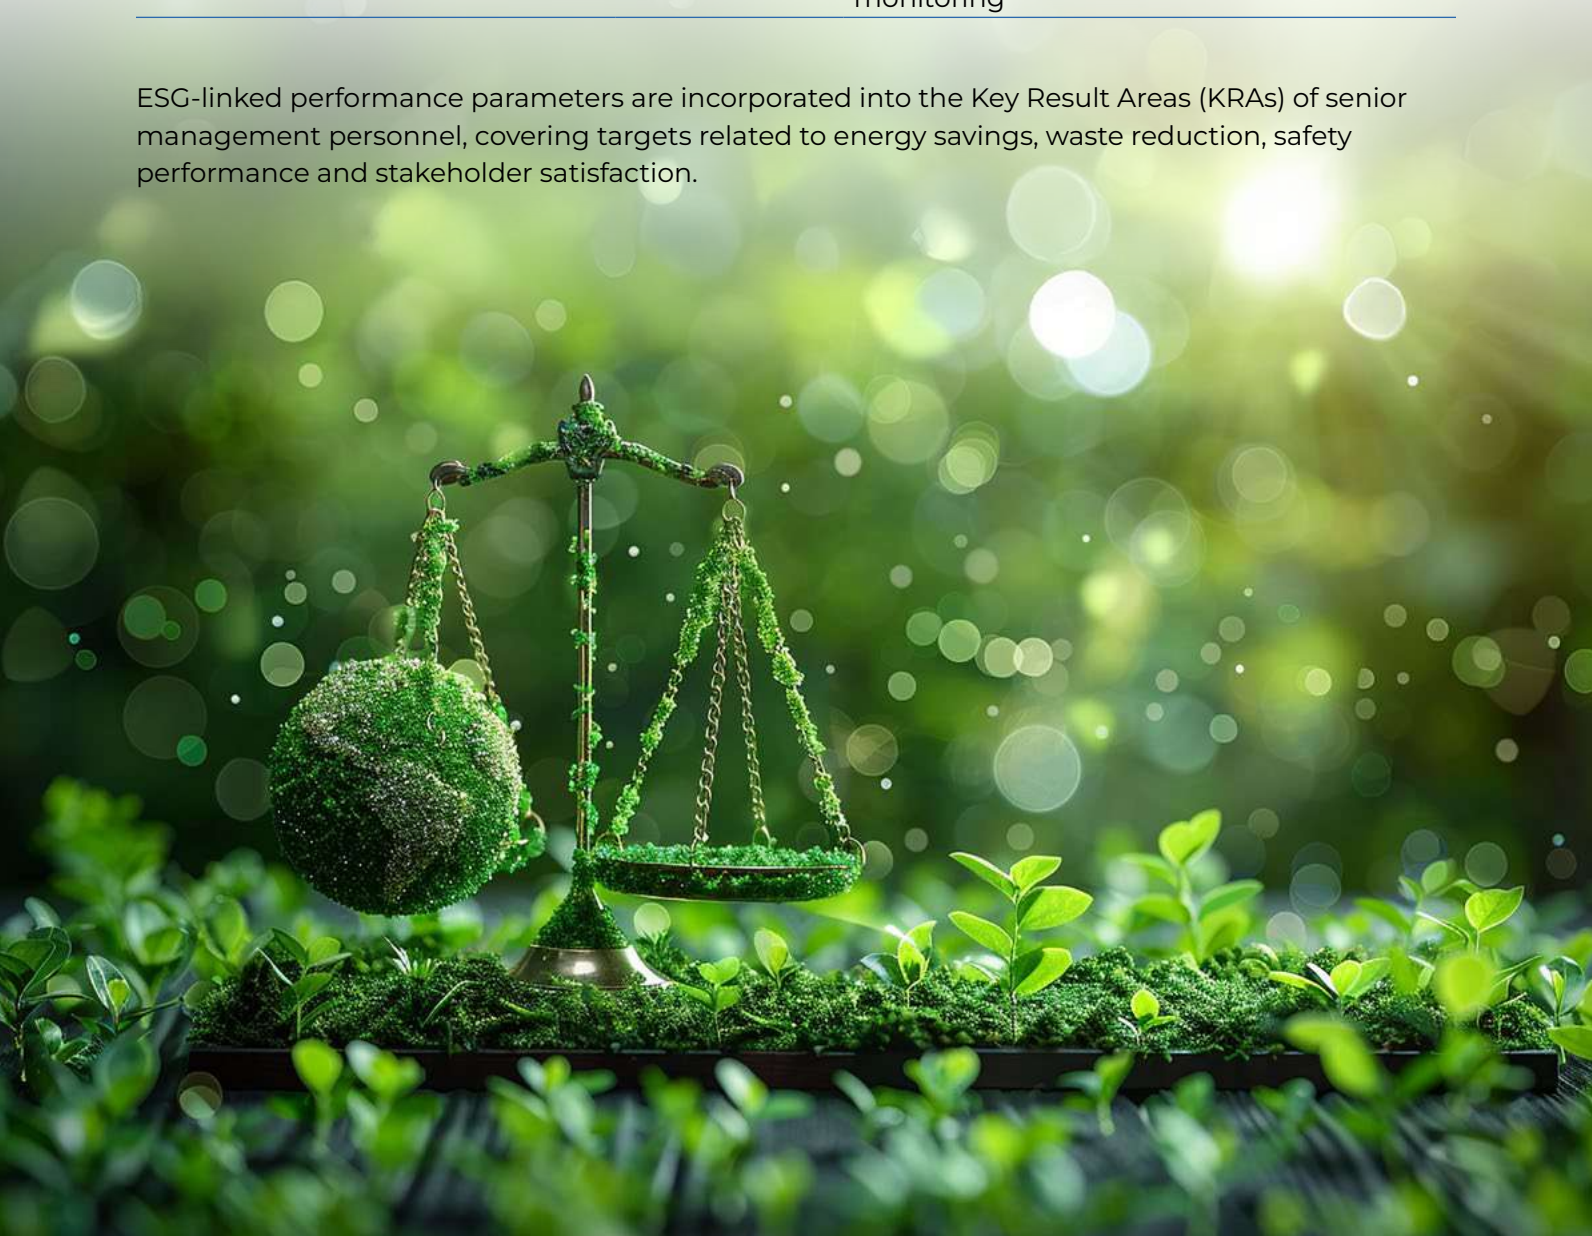

occupant safety. The Company also recognises that growing regulatory expectations, lender requirements, investor ESG screening and market preferences for green-certified buildings create both compliance obligations and strategic differentiation opportunities.

Physical climate risks for NeoLiv’s key regions have been assessed using external data sources such as the World Bank Climate Knowledge Portal, Think Hazard and Climate Impact Explorer, to understand how changes in hazard frequency and intensity could affect project sites over multiple time horizons.

Prioritised Physical Climate Risks and Opportunities

NCR Region - Risk Type	Hazard / Opportunity	Financial Implication	Time Horizon
Physical Acute Risk	Earthquake	Structural damage; regulatory non-compliance; safety incidents	Medium to Long-term
Physical Chronic Risk	Extreme Heat	Worker productivity loss; increased HVAC and energy costs	Short to Long-term
Opportunity	Climate-Resilient Infrastructure	Increased asset valuation; premium pricing; improved investor confidence	Medium to Long-term

MMR Region - Risk Type	Hazard / Opportunity	Financial Implication	Time Horizon
Physical Acute Risk	Cyclone / Storm	Structural damage; power outage; increased insurance claims	Medium to Long-term
Physical Chronic Risk	Extreme Heat	Worker productivity loss; HVAC costs; occupational heat stress	Short to Long-term
Opportunity	Climate-Resilient Infrastructure	Increased asset valuation; premium pricing; improved investor confidence	Medium to Long-term

Risk Management

NeoLiv’s climate risk assessment framework is aligned with the TCFD Risk Management pillar and operates through a two-step process: data collection from verified third-party sources (including the World Bank Climate Knowledge Portal, Think Hazard and Climate Impact Explorer), followed by internal validation using a two-factor Likert scale assessing impact and likelihood. Post identification, a prioritization exercise of risks is conducted by assessing revenue impacts to understand the most impactful risks. Neolिव conducts assessment for identification of additional mitigation measures in alignment with the existing measures in place. Based on our initial assessment, detailed planned mitigation measures against identified risks are listed in the section 7.6 Mitigation Plan.

NeoLiv also evaluates the potential implications of climate-related risks on project timelines, construction and operating costs, asset resilience, insurance exposure and access to finance. Climate-related risks and opportunities are progressively being considered within broader corporate and project-level risk review processes through periodic assessment, inclusion within internal risk registers and ongoing management discussions.

Oversight of climate-related matters is supported through periodic review by the ESG Management Committee and Board ESG Committee, which review emerging climate-related risks, mitigation priorities and evolving sustainability considerations relevant to the Company’s operations and long-term development strategy.

Physical Risk Assessment Summary

Site	Risk	Type	Priority Level
Sonipat (NCR)	Earthquake	Physical Acute	High
Sonipat (NCR)	Extreme Heat	Physical Chronic	Medium
Sonipat (NCR)	Cyclone / Storm	Physical Acute	Medium
Faridabad (NCR)	Earthquake	Physical Acute	High
Faridabad (NCR)	Extreme Heat	Physical Chronic	High
Faridabad (NCR)	Urban Flood / Waterlogging	Physical Acute	Low
Khopoli (MMR)	Cyclone / Storm	Physical Acute	High
Khopoli (MMR)	Extreme Heat	Physical Chronic	Medium

Transition climate risks

In addition to physical climate risks, NeoLiv recognises that it is exposed to transition risks arising from potential changes in climate related regulation, evolving market expectations and technological shifts. Previously, these risks were monitored qualitatively through tracking of regulatory developments, lender and investor ESG expectations and trends in customer preferences for low carbon, certified and climate resilient homes. This year, NeoLiv has identified transition risks associated with climate-related regulatory changes, evolving market expectations, and technological developments. The assessment considered factors such as regulatory requirements, lender and investor ESG expectations, and changing customer preferences towards low-carbon, certified, and climate-resilient homes.

NeoLiv is in the process of assessing financial impacts of Transition related financial risks and plans to report in coming years. NeoLiv recognizes that the organisation is exposed to transition risks arising from regulatory and policy changes, evolving market preferences, technological advancements, carbon and emission regulations, availability of sustainable materials, and increasing ESG expectations from lenders and investors. These risks may impact project planning and design, increase compliance and construction costs, influence access to financing, affect procurement timelines, and drive the need for sustainable and climate-resilient developments. NeoLiv continues to monitor these emerging risks and integrate sustainability considerations into its development approach. Going forward, the Company intends to further strengthen its understanding and management of transition-related risks as its climate risk framework evolves.

Major Transition Risk	Description
Regulatory and Policy Changes	Stricter environmental regulations, green building mandates, and ESG disclosure requirements
Market Shift Towards Green Buildings	Increasing demand for sustainable and energy-efficient assets
Technology Transition	Adoption of low-carbon technologies and smart building systems
Carbon and Emission Regulations	Introduction of carbon pricing and emission reduction requirements
Sustainable Material Availability	Limited supply and higher cost of sustainable construction materials
Financing and Investor Expectations	Growing preference for ESG-compliant developments and green financing

Metrics and Targets

NeoLiv commenced GHG emissions tracking in FY 2024-25 in accordance with the GHG Protocol Corporate Standard. The table below presents the emissions baseline and current-year reporting status.

Scope	Source	Methodology / Emission Factor	FY 2025-26 (MT CO ₂ e)
Scope 1	Direct emissions from project-level DG set operations	GHG Protocol Corporate Standard; IPCC AR6 GWP values	86.7 tCO ₂ e
Scope 2	Indirect emissions from purchased electricity (offices)*	CDM CO ₂ Baseline Database - Indian Power Sector, Version 20.0 (CEA)	40.11 tCO ₂ e
Scope 3	Not quantified in FY 2025-26; mapping framework under development		N/A

**Scope 2 emissions exclude the Gurugram and Mumbai office as they operate from a shared workspace where electricity consumption is not separately attributable. Additionally, 100% of our operational sites uses Diesel sets for generating electricity and other relevant use cases.*

Note: Reported data may change following the publication of the assurance report.

As NeoLiv's operations and value chain continue to develop, Scope 3 emissions have not yet been assessed for this reporting period. The Company plans to progressively map key upstream and downstream emission sources and build a comprehensive Scope 3 accounting framework aligned with globally accepted methodologies.

Climate-related Opportunities

Beyond physical climate risks, NeoLiv's standing investment portfolio and business model present a range of strategic opportunities arising from the transition to a more climate-resilient built environment:

- Green Building Certification Premium: All NeoLiv developments are designed for IGBC, LEED or EDGE green building certification, which can command a market premium in India's residential market, reflecting consumer willingness to pay for verified energy efficiency, water conservation and healthy indoor environments.
- Resilient Infrastructure as Value Differentiator: As the frequency and intensity of extreme weather events increases across India, NeoLiv's commitment to climate-resilient infrastructure represents a long-term value protection strategy that reduces risk while creating product differentiation.

Over the medium term, NeoLiv intends to evaluate recognised net zero building standards – including EDGE Zero Carbon, IGBC Net Zero and LEED Zero – for selected clubhouse and common area developments, with the aim of progressively incorporating net zero design principles into its project pipeline.

Mitigation Plan

Risk	Planned Mitigation Measures
Extreme Heat	Shading shelters over high-activity work areas; cool water stations; specification of high Solar Reflectance Index (SRI) roofing and paving materials to reduce post-construction surface temperatures.
Earthquake	Third-party structural peer review to independently verify IS 1893 and IS 13920 compliances; anchoring of non-structural elements (false ceilings, HVAC, MEP, glass partitions); Earthquake Emergency Response Plan (EERP) drills.
Cyclone / Storm	IS 875-3 wind load compliance; formal monsoon protocol (June-September) with pre-monsoon site hardening checklist; strict on-site material securing protocols to prevent wind-borne projectile risk; contractor all-risk insurance inclusive of named windstorm / cyclone cover.

Environmental Stewardship

Key Material Topics

Climate Strategy | Operational Eco-efficiency |
Biodiversity | Green Building

Stakeholders Impacted

Customers | Community | Value Chain Partners |
Regulatory Authorities

Our Approach

At NeoLiv, we believe that sustainable development goes beyond infrastructure it is about creating long-term value for people and communities while conserving the natural environment. Sustainable practices are integrated across the full project lifecycle, from planning and design through construction and final property handover.

Our approach focuses on building resilient, future-ready infrastructure that promotes environmental stewardship while enhancing the quality of life for residents. As part of this journey, NeoLiv is working towards ISO 14001 Environmental Management System certification across all project sites, reinforcing our commitment to systematic environmental management and responsible urban development.

NeoLiv has initiated the development of an Environmental and Health & Safety (EHS) management framework aligned with ISO 14001 principles and relevant occupational health and safety standards. The framework progressively incorporates elements such as policy implementation, hazard identification, risk assessment, operational controls, legal compliance tracking, training, incident reporting, monitoring and management review processes.

Site level Environmental and HSE Management Plans progressively define responsibilities, procedures and monitoring approaches for key topics including energy use, emissions, waste management, water stewardship, occupational safety and emergency preparedness. These efforts are supported through periodic internal reviews, monitoring mechanisms and corrective action tracking initiatives.

Energy Management

Energy management is an integral part of NeoLiv's long-term sustainability vision and is closely aligned with its ESG commitments. We believe that responsible energy management is essential for reducing environmental impacts, improving operational efficiency and delivering sustainable living spaces.

During FY 2025-26, approximately 1251.18 GJ (As per IPCC/MoEFCC) or 32,414 litres of direct energy was consumed through diesel generator (DG) sets to support essential activities as permanent grid connectivity is under development. Indirect energy consumption at the Gurugram & Mumbai corporate office is not included due to it being shared space with electricity consumption tracking not available. NeoLiv plans to establish tracking and attribution mechanisms for this location in the coming year.

We also undertake various Energy Efficiency and Management initiatives in accordance with our ESG commitments and a sustainable future:

Approach	Initiative	Description
Renewable Energy	On-Site Solar Power	Rooftop solar PV installations across community buildings and common areas, targeting at least 50% renewable energy share for clubhouses and common area services.
Integrated Design	Early Design Collaboration	Architects, engineers, sustainability consultants and energy modellers engaged at concept stage to embed energy performance into project design.
Integrated Design	Passive Design Strategies	Building orientation, cross-ventilation, thermal massing and shading devices used to minimise active heating and cooling requirements.
Integrated Design	Energy Modelling & Simulation	Energy simulations conducted for all projects in line with green building certification standards to assess and improve design-stage performance.
Integrated Design	High-Efficiency Building Systems	HVAC, lighting and electrical systems selected based on energy efficiency benchmarks and integrated with smart controls.
Integrated Design	Optimised Building Envelope	High-performance insulation, airtight detailing and thermal comfort analysis to enhance occupant wellbeing and reduce energy consumption.

GHG Emission Management

NeoLiv quantifies its Scope 1 and Scope 2 greenhouse gas emissions in alignment with the GHG Protocol Corporate Standard. Scope 1 emissions are calculated using IPCC AR6 GWP values, and Scope 2 emissions are estimated using the CEA CO₂ Baseline Database for the Indian Power Sector (Version 20.0).

Scope	Source	Methodology / Emission Factor	FY 2025-26 (MT CO ₂ e)
Scope 1	Direct emissions from project-level DG set operations	GHG Protocol Corporate Standard; IPCC AR6 GWP values	86.7 tCO ₂ e
Scope 2	Indirect emissions from purchased electricity (offices)*	CDM CO ₂ Baseline Database - Indian Power Sector, Version 20.0 (CEA)	40.11 tCO ₂ e
Scope 3	Not quantified in FY 2025-26; mapping framework under development		N/A

**Scope 2 emissions exclude the Gurugram & Mumbai office locations as they operate within a shared workspace where electricity consumption is not separately metered*

Note: Reported data may change following the publication of the assurance report.

In addition to emissions reporting, NeoLiv aims to maintain PM2.5 and PM10 levels within all project clubhouses in full alignment with AQI standards established by the Pollution Control Board, through regular monitoring and best-practice air quality management.

Water Management

Water is recognised as a critical shared resource, and NeoLiv is committed to managing it responsibly across all stages of development. Current on-site water requirements are being met through approved third-party water tankers, amounting to approximately 3226.6 KL for FY 2025-26, ensuring compliance with legal sourcing norms and reducing pressure on local groundwater resources. We operate on zero

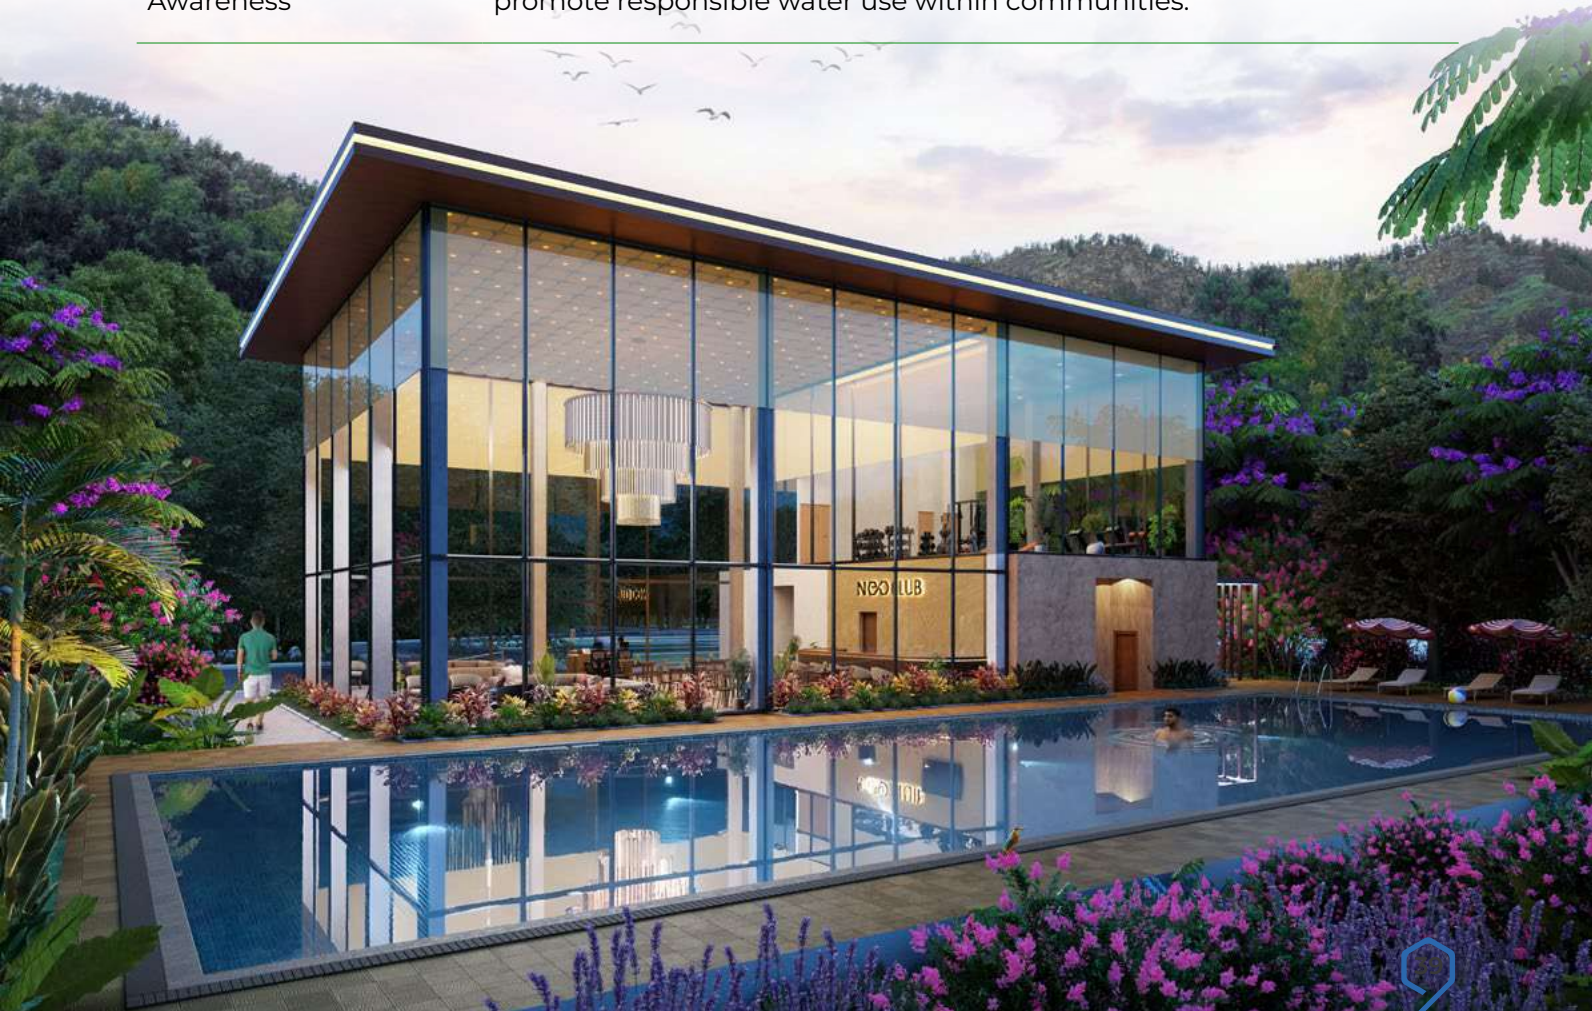

water discharge model with all water withdrawn being utilised for curing, construction activity and relevant discharged water is recycled to use for flushing and landscaping on site. Water used for construction activities as well as drinking purposes is regularly tested by authorized agencies to ensure compliance with applicable quality and safety standards.

Metric / Description	FY 25-26
Third-Party Water (Municipal & Tankers) (KL)	3226.6
Groundwater (Borewells) (KL)	1902
Drinking Water (KL)	32.17

Note: Reported data may change following the publication of the assurance report

As a next step towards our commitments, we undertake various water efficiency and management initiatives:

Initiative	Description
Supply Requirement Assessment	Water demand assessed for both construction and post-occupancy phases to support efficient planning and identify supply gaps.
Drought-Tolerant Landscaping	Native, drought-resistant species combined with drip irrigation systems to reduce water demand and improve efficiency.
High-Efficiency Fixtures	Low-flow faucets, dual-flush toilets and sensor-based urinals specified across all projects to reduce potable water consumption.
Rainwater Harvesting	Harvesting infrastructure under development to increase on-site water capture and reduce dependence on external sources.
Sewage Treatment Plants (STPs)	Where feasible, STPs will be installed to treat wastewater for reuse in landscaping, flushing and HVAC systems.
Stormwater & Greywater Reuse	Infrastructure designed to enable collection, treatment and reuse of stormwater and greywater, supporting water circularity.
Post-Construction Monitoring	Regular physical, chemical and biological water quality testing; digital metering for zone-wise tracking and early leak detection.
Conservation Awareness	Water budgeting measures and resident engagement programmes to promote responsible water use within communities.

Waste Management

Responsible waste management is embedded into NeoLiv's development approach from project inception. Structured systems for managing both hazardous and non-hazardous construction waste are being established in alignment with ESG commitments and applicable regulations. Hazardous waste is managed exclusively through approved and certified vendors, with regular monitoring, audits and documentation. The Company's long-term objective is to achieve zero waste to landfill across all construction projects.

As per our waste management practices, all waste is segregated based on its classification and managed in designated waste handling areas identified by the Company. Waste is stored,

treated, and disposed of in accordance with applicable environmental requirements, and no waste is disposed of at unauthorized off-site dumpsites or landfills.

Recyclable materials are temporarily stored on-site until collected by authorized waste management agencies. Residual and combustible waste is also handled as per Company requirements and approved waste management procedures.

Hazardous waste is collected, transported, treated, and disposed of in compliance with applicable local government and municipal regulations to ensure safe and environmentally responsible waste management practices.

Our Waste Management initiatives:

Phase	Initiative	Description
Construction	Waste signage systems	Installation of on-site waste signage to support segregation, promote material recovery and facilitate compliance with sustainability targets.
Construction	Green building integration	Waste management practices aligned with applicable green building certification requirements.
Construction	Professional workforce	Deployment of trained personnel and authorised agencies for the safe handling and disposal of hazardous waste.
Construction	Structured training	Regular training sessions on equipment hazards and control measures, conducted on a weekly, fortnightly and monthly basis.
Post-Construction	Organic waste composters	Composters installed at all sites to convert biodegradable waste into nutrient-rich compost for landscaping, supporting zero-waste-to-landfill goals.

Biodiversity

NeoLiv is committed to minimising its impact on local biodiversity through sustainable construction practices that protect and sustain surrounding ecosystems. No project sites are located within or in close proximity to red zones or ecologically sensitive areas. Proactive measures including controlled site clearing, dust and noise

management and soil stabilisation techniques, waste management practices and air quality monitoring are implemented to prevent erosion and habitat disturbance throughout the project lifecycle, including the construction phase.

Phase	Initiative	Description
Planning	Ecological Site Assessment	Site natural terrain, native vegetation and wildlife presence are assessed to guide conservation-led design decisions.
Planning	Expert Collaboration	Environmental consultants and green building specialists are engaged to integrate ecological considerations into design.
Planning	Integrated Site Planning	Site layouts prioritise retention of mature trees, native species, natural contours and ecological corridors.
Construction	Soil Stabilisation	Silt barriers, mulching and vegetation cover control erosion and prevent sediment runoff.
Construction	Environmental Monitoring	Ongoing monitoring enables timely adjustments to construction practices to reduce ecological disturbance.
Post-Construction	Native Landscaping	Landscapes designed with 100% native, drought-resistant species supporting local ecology and minimising water demand.
Post-Construction	Green Open Spaces	Open areas developed as microhabitats for small wildlife and to improve ecological connectivity across sites.
Post-Construction	Green Corridors	Buffer zones and green corridors integrated to foster nature-integrated, biodiversity-positive living environments.

Green Building Certification

NeoLiv is committed to sustainable development and is working towards IGBC (Indian Green Building Council) Pre-Certification for key project amenities, including the clubhouse within each development. This step ensures that sustainability and ESG considerations are integrated at the earliest stages of planning and design, resulting in infrastructure that is resource-efficient and environmentally responsible.

As the Company's projects primarily follow a plotted development model where individual homeowners will independently construct their residences a project-wide green building certification is not applicable for the overall community. NeoLiv actively encourages sustainable construction practices among plot owners by promoting awareness of green building principles and plans to introduce educational guidance initiatives to support environmentally responsible homebuilding.

For FY 2025-26, NeoLiv achieved an important milestone in its green building journey. The NeoLiv Clubhouse at Sonipat received IGBC Green New Buildings Pre-Certification at the Platinum level from the Indian Green Building Council (IGBC), reinforcing the Company's commitment to sustainable and resource-efficient development practices.

In addition, NeoLiv continues to integrate green building considerations across project planning and design processes and intends to pursue IGBC Gold or above certification standards across applicable developments, wherever feasible. Beyond green certification requirements, we also consider additional site selection criteria, including economic factors, transport and transit networks, natural risk assessments, and regulatory requirements related to native species and wildlife.

Socially Responsible Development

Key Material Topics

Climate Strategy | Operational Eco-efficiency |
Biodiversity | Green Building

Stakeholders Impacted

Customers | Community | Value Chain Partners |
Regulatory Authorities

Our Approach

Social responsibility is central to how NeoLiv designs, develops and delivers residential communities. As a people-centric platform, the Company recognises that long-term value creation depends on responsible and trustworthy relationships with its employees, workers, customers, communities and value chain partners.

NeoLiv’s social strategy is anchored in key material topics identified through its ESG framework, including employee welfare, customer wellbeing and community engagement, occupational health and safety, diversity, equity and inclusion, human rights and employee engagement. These priorities are aligned with the Company’s broader vision of building joyful communities and living experiences through people, quality, safety and service excellence.

Employee Development Framework

NeoLiv regards its workforce as a strategic asset and recognises that sustained business performance depends on building the right capabilities across functions and levels. The employee development framework is being strengthened through structured induction, role-based capability building, compliance-related training, behavioural interventions and leadership engagement. We track indicators such as training hours per employee, internal mobility and promotion rates to ensure that development initiatives address both business needs and individual growth aspirations.

In FY 2025-26, average training hours per employee were 7 hours overall (4 hours for female employees; 9 hours for male employees). Total POSH training across the organisation amounted to 106 hours. By category: Partners received 36 hours (coaching, team building and induction); Sales Team received 2 hours (team building) (GRI 404-1).

Workforce Highlights

NeoLiv continued to strengthen its workforce during FY 2025-26 to support business growth, project execution and organisational capability building. The total workforce comprised 99 employees (GRI 405-1):

Workforce Metric	FY 2025-26
Total employees	106
Male employees	72 (67.99%)
Female employees	34 (32%)

Note: Reported data may change following the publication of the assurance report.

We monitor key human capital metrics, including total workforce, gender representation, age group distribution, employee tenure, attrition, internal promotions and training hours per employee. Insights from these metrics inform our approach to talent attraction, development, retention and workforce planning.

Training Split	Hours FY 2025-26	Training Type
Overall Average (all employees)	7 hrs/employee	All programmes combined
Female employees (average)	4 hours	All programmes combined
Male employees (average)	9 hours	All programmes combined
Partners (by category)	36 hours	Coaching + Team Building + Induction
Sales Team (by category)	2 hours	Team Building
POSH Training (total organisation)	106 hours	Mandatory compliance

Note - Training hours include POSH-related and other mandatory trainings. The Company plans to track training hours by employee category and gender to identify coverage gaps and ensure equitable access to development opportunities.

Note: Reported data may change following the publication of the assurance report.

Employee Satisfaction

Employee satisfaction is a key priority at NeoLiv. During the last quarter of FY 2024-25, the Company conducted a comprehensive employee satisfaction survey that achieved 100% participation, with findings presented to the leadership team to inform workplace improvements and future people focused initiatives. To complement the survey process, the Founder & CEO and Head of HR conduct regular one on one interactions with employees to gather qualitative insights, support proactive issue resolution and strengthen trust. The survey uses a structured questionnaire with rating scales and open ended questions to assess overall satisfaction, work environment, leadership, learning and development opportunities, work life balance and wellbeing, and the insights are translated into targeted action plans to enhance employee experience, engagement and retention.

In FY 2025-26, We achieved “Great Place to Work 2025-26” with record [XX participation rate] participation. Internally, we set goals to promote employee learning, wellbeing and overall work satisfaction aiming at continuous improvement, and ongoing monitoring of performance and progress.

Employee Wellbeing

Employee wellbeing is a core pillar of NeoLiv’s human capital approach. The Company’s NeoLiv corporate office certified IGBC Platinum for interiors embeds wellbeing by design through: biophilic design with indoor plants for air quality management; ergonomically designed workstations; warm interiors with wooden flooring; informal seating areas and pantry spaces for social interaction; and access to books, games and colouring books for mental health support.

The Company also provides employer-sponsored health insurance and voluntary programmes including annual health check-ups, fitness initiatives, Employee Assistance Programme (EAP) and counselling for mental health, stress management workshops and nutrition guidance. (GRI 403-6).

Employee Engagement

NeoLiv promotes structured engagement through town hall meetings that bring together employees from both the MMR and NCR regions in in-person and virtual formats. Our quarterly CEO Townhall connects employees across all locations directly, strengthening organizational alignment and transparency. During the reporting period, two CEO Townhall sessions were successfully conducted on 29 January 2026 and 31 March 2026. The Founder & CEO shares updates on business performance, strategic

priorities, and achievements, followed by open Q&A sessions. Social engagement initiatives including team events, festival celebrations, and recognition programmes further reinforce collaboration, inclusion, and a positive workplace culture.

Our quarterly CEO Townhall connects employees across all locations directly. We have successfully conducted 2 sessions on 29th January 2026 and 31st March 2026

Initiative	Focus Area	Key Highlights & Impact
NeoFam	Employee & Family Engagement	Brought together 84 employees and 74 family members to experience the organization’s culture, values, and commitment to work-life balance.
NeoLife+	Employee Wellbeing	Holistic wellbeing initiative covering physical health, mental health, and financial wellbeing. 8 employees completed wellness checks, reinforcing focus on employee wellbeing.
NeoPulse	Team Engagement & Communication	Enables HODs to connect with teams through informal conversations, strengthening trust, team bonding, and understanding employee support needs.
CHRO Connect & HRBP Connect Sessions	Employee Connect & Feedback	Conducted 14 one-on-one sessions to understand employee aspirations, concerns, and support requirements while strengthening the Employee First culture.
CEO Townhall	Leadership Communication	Quarterly townhalls conducted on 29 January 2026 and 31 March 2026, connecting employees directly with leadership to discuss vision, achievements, and growth plans.
Partners’ Induction Program	Onboarding & Integration	Successfully onboarded 18 new joiners and 4 Management Trainees, helping them align with the organization’s culture, vision, and values.
NeoAspire	Leadership Development	Leadership development initiative focused on nurturing future leaders. Identified 9 high-potential employees in Phase 1, with the 2026 batch under finalization.

Employee Benefits

NeoLiv’s employee benefits are designed to support a flexible, inclusive and trust-based work environment. Highlights include:

- Flexible working hours with no strict monitoring or punching requirements.
- Maternity leave policy with generous paid leave, exceeding statutory requirements.
- Paternity leave of seven working days for new fathers, applicable for up to two children.
- Work-from-home policy allowing two remote workdays per month, plus on-need basis.

Work Environment

NeoLiv is committed to providing a healthy, safe and conducive work environment across all office locations. This includes clean drinking water, well-lit workspaces, ergonomically designed seating, hygienic washrooms and cafeteria spaces that promote social interaction and collaboration. Office layouts are designed to encourage open communication and cross-functional teamwork.

Diversity, Equity and Inclusion

At NeoLiv, diversity, equity and inclusion (DEI) are core to how the Company builds a responsible culture. Our DEI approach is guided by our ESG Policy, HR Policy and Human Rights Policy. (GRI 405-2).

DEI and Human Capital Metrics (FY 2025–26)

NeoLiv monitors human capital metrics for its workforce and governance bodies, including gender, age distribution and gender pay ratio, at the entity level.

DEI Indicator (FY 2025-26)	Value / Status
Employee Demographics	
Total workforce	106
Male employees	72 (67.99%)
Female employees	34 (32%)
By Age	
Employees under 30 years	20 (9M, 11F)
Employees 30-50 years	81 (58M, 23F)
Employees above 50 years	5 (4M, 1F)
Board Demographics	
Board members (total)	3 (M)
Board members aged 30-50	3 (M)
Board members above 50	0
% Women on Board	0
Pay Ratio	
Salary ratio Female:Male (overall)	24%

Note (GRI 405-2): The female-to-male salary ratio reflects current role composition and seniority mix. NeoLiv is actively addressing this gap through equitable hiring and progression practices.

Note: Reported data may change following the publication of the assurance report.

NeoLiv is committed to maintaining a diverse, equitable and inclusive workplace that provides equal opportunities to all employees and promotes a culture of dignity, fairness and mutual respect. We review workforce and leadership composition across gender and age groups, together with pay and progression data, to identify gaps and guide inclusive hiring and development decisions. The Company follows a zero tolerance approach towards any form of discrimination based on gender, race, caste, religion, ethnicity, age, disability or any other protected characteristic across all aspects of employment.

DEI Indicator (FY 2025-26)	Value / Status
Discrimination	
Discrimination incidents reported	0
Discrimination incidents resolved	0

Note: Reported data may change following the publication of the assurance report.

Occupational Health and Safety

The health and safety of employees, contractors and other stakeholders are of paramount importance to NeoLiv. The Company’s OHSMS complies with the Factories Act 1948 and BOCW Act 1996 and is aligned with ISO 45001:2018. All employees, contractual workers and site visitors at every asset location are covered. Workers may report hazards through supervisors, safety officers, toolbox talks or formal channels, with full protection against retaliation (GRI 403-1, 403-2).

Regular safety audits and Hazard Identification and Risk Assessments (HIRA) are conducted to identify and mitigate workplace hazards. The results of risk assessments and inspections are reviewed regularly to improve the occupational health and safety management system. All work-related incidents are investigated through a structured process including root cause analysis. Corrective and preventive actions are

implemented based on the hierarchy of controls to prevent recurrence. Findings are documented and shared for continuous improvement. During FY 2024-25 and FY 2025-26, NeoLiv recorded zero work-related fatalities, zero high-consequence injuries and zero recordable injuries across all employee and contractor categories. No cases of work-related ill-health were reported. During the reporting period, one minor work-related injury involving a contract worker was recorded. The incident was of a minor nature and did not result in any lost workdays, hospitalization, or long-term health impacts. The affected worker received immediate first-aid treatment, which involved the application of a small bandage, and was able to resume normal duties shortly thereafter. NeoLiv also achieved a total of 219,220 safe work hours, reflecting its continued commitment to maintaining a safe and healthy workplace. (GRI 403-9, 403-10).

Occupational health and safety indicators (FY 2025–26)

OHS Indicator	Employees	Contract Workers	Total
Fatalities - work-related injury	0	0	0
High-Consequence Injuries	0	0	0
Recordable Work-Related Injuries	0	1	1
Fatalities - work-related ill health	0	0	0
Recordable Cases of Work-Related Ill Health	0	0	0

Note: Reported data may change following the publication of the assurance report.

HSE Regional Performance

NeoLiv maintained a zero-incident record across both NCR and MMR regions during FY 2025-26, covering all project sites and corporate offices. Regular safety audits and Hazard Identification and Risk Assessments (HIRA) were conducted. Site-level HSE performance data will be progressively enhanced as construction activities expand across the portfolio.

To maintain a safe working environment and sustain the zero-incident performance, appropriate preventive and control measures

were implemented across project sites. These included proper barricading of excavated and high-risk areas using caution tape and green safety nets, availability of fire extinguishers at designated fire stands, safe underground routing and protection of electrical cables and joints, and provision of necessary Personal Protective Equipment (PPE) to all workers. Continuous monitoring and safety awareness practices were also undertaken to strengthen on-site safety management.

Safety Trainings

NeoLiv employs a hierarchy of controls approach elimination, substitution, engineering controls, administrative controls and PPE. OHS training covers site induction, job-specific hazard training, high-risk activity training (working at height, confined space, electrical safety), emergency response and first aid. Training needs are assessed through HIRA/JSA and incident review. All training is free of charge, conducted during paid working hours, and delivered in languages understood by the workforce (GRI 403-5).

Health and Wellbeing of Residents and Communities

NeoLiv is dedicated to creating healthy, inclusive and comfortable living environments that enhance the wellbeing of residents and surrounding communities. Health and wellbeing considerations are integrated into project planning and design, covering indoor environmental quality, access to open and green spaces, and user comfort and safety across all age groups.

Active Design

Walking paths, stairways and community areas that encourage everyday physical activity.

Biophilic Design

Green walls, nature-inspired materials and landscaped outdoor spaces to strengthen connection with nature.

Daylight Access

Building orientation and glazing optimised for natural light and visual comfort.

Inclusive Design

Universal access and comfort ensured for individuals of all ages and abilities.

Natural Ventilation

Passive ventilation systems to enhance indoor airflow and air quality.

Recreation & Fitness Spaces

Parks, lawns, fitness zones and walking tracks to support an active lifestyle.

Human Rights

NeoLiv has established a comprehensive Human Rights Policy that guides operations and explicitly prohibits child labour, forced labour and compulsory labour. Social risk assessments are conducted to identify, evaluate and mitigate potential social risks arising from operations and stakeholder interactions. The Company respects the right of employees to freedom of association while currently operating without formal labour unions.

During FY 2025-26, zero non-compliance incidents with the Human Rights Policy were recorded.

Community Wellbeing

As the organisation is currently in its foundational phase, NeoLiv is building the foundations for structured community wellbeing programmes that will be introduced in the coming reporting period. These initiatives will focus on key areas aligned with the needs of surrounding communities, with the goal of fostering wellbeing, improving quality of life and creating positive, long lasting social impact. NeoLiv currently does not monitor community related impacts associated with its projects as of now as majority of our projects are situated in sub urban regions without significant communities around the site in addition to limited construction activities undertaken in the current fiscal year.

Customer Engagement and Satisfaction

NeoLiv continuously tracks metrics that reflect customer engagement and satisfaction, recognising that trust and transparency are foundational to long-term homebuyer relationships. Customer grievances can be raised via email to the Market Sales and CRM Head; in-person at the Sales Gallery; or through Nova NeoLiv's AI assistant available 24×7. All concerns are acknowledged within 48 working hours.

Resolution SLAs: standard escalations within 21 business days; partner/founder escalations within 7 business days. In FY 2025-26, NeoLiv received 1 customer grievance, resolved within SLA, with post-resolution NPS confirming satisfactory closure.

Additionally, NeoLiv conducted a Net Promoter Score (NPS) assessment to evaluate customer satisfaction and overall experience across its projects and services. The assessment covered 81 customers, of which 70 customers provided ratings between 8 and 10, reflecting a strong level of customer satisfaction and a high likelihood of recommending the Company. Additionally, 6 customers provided average ratings, while 5 customers rated below average, offering valuable feedback for continuous improvement. The results highlight NeoLiv's continued focus on enhancing customer experience, service quality, and long-term customer relationships.

Customer Grievance Metric	Value FY 2025-26
Total Grievances Received	1
Resolved Within SLA (21 business days)	1 (100%)
Post-Resolution NPS Re-survey	Satisfactory closure confirmed
Possession-Related Grievances	N/A
Standard SLA - General Escalations	21 business days
Partner/Founder Escalations SLA	7 business days
Acknowledgement Timeline	Within 48 working hours

Secure and Robust Governance

Overview

NeoLiv is committed to maintaining high standards of corporate governance and recognises the growing expectations of investors, regulators and other stakeholders. The Governance pillar of NeoLiv’s ESG strategy emphasises responsible leadership, ethical conduct, risk resilience and sustainable business outcomes. This commitment is reflected in policies, processes and disclosures designed to be transparent, inclusive and forward-looking.

Governance acts as a strategic enabler supporting NeoLiv’s vision to redefine urban living through responsible and customer-oriented real estate development. Governance practices are regularly benchmarked against national and global standards to identify and address gaps across supply chain management, cybersecurity, data privacy, risk management and sales and marketing.

ESG Governance

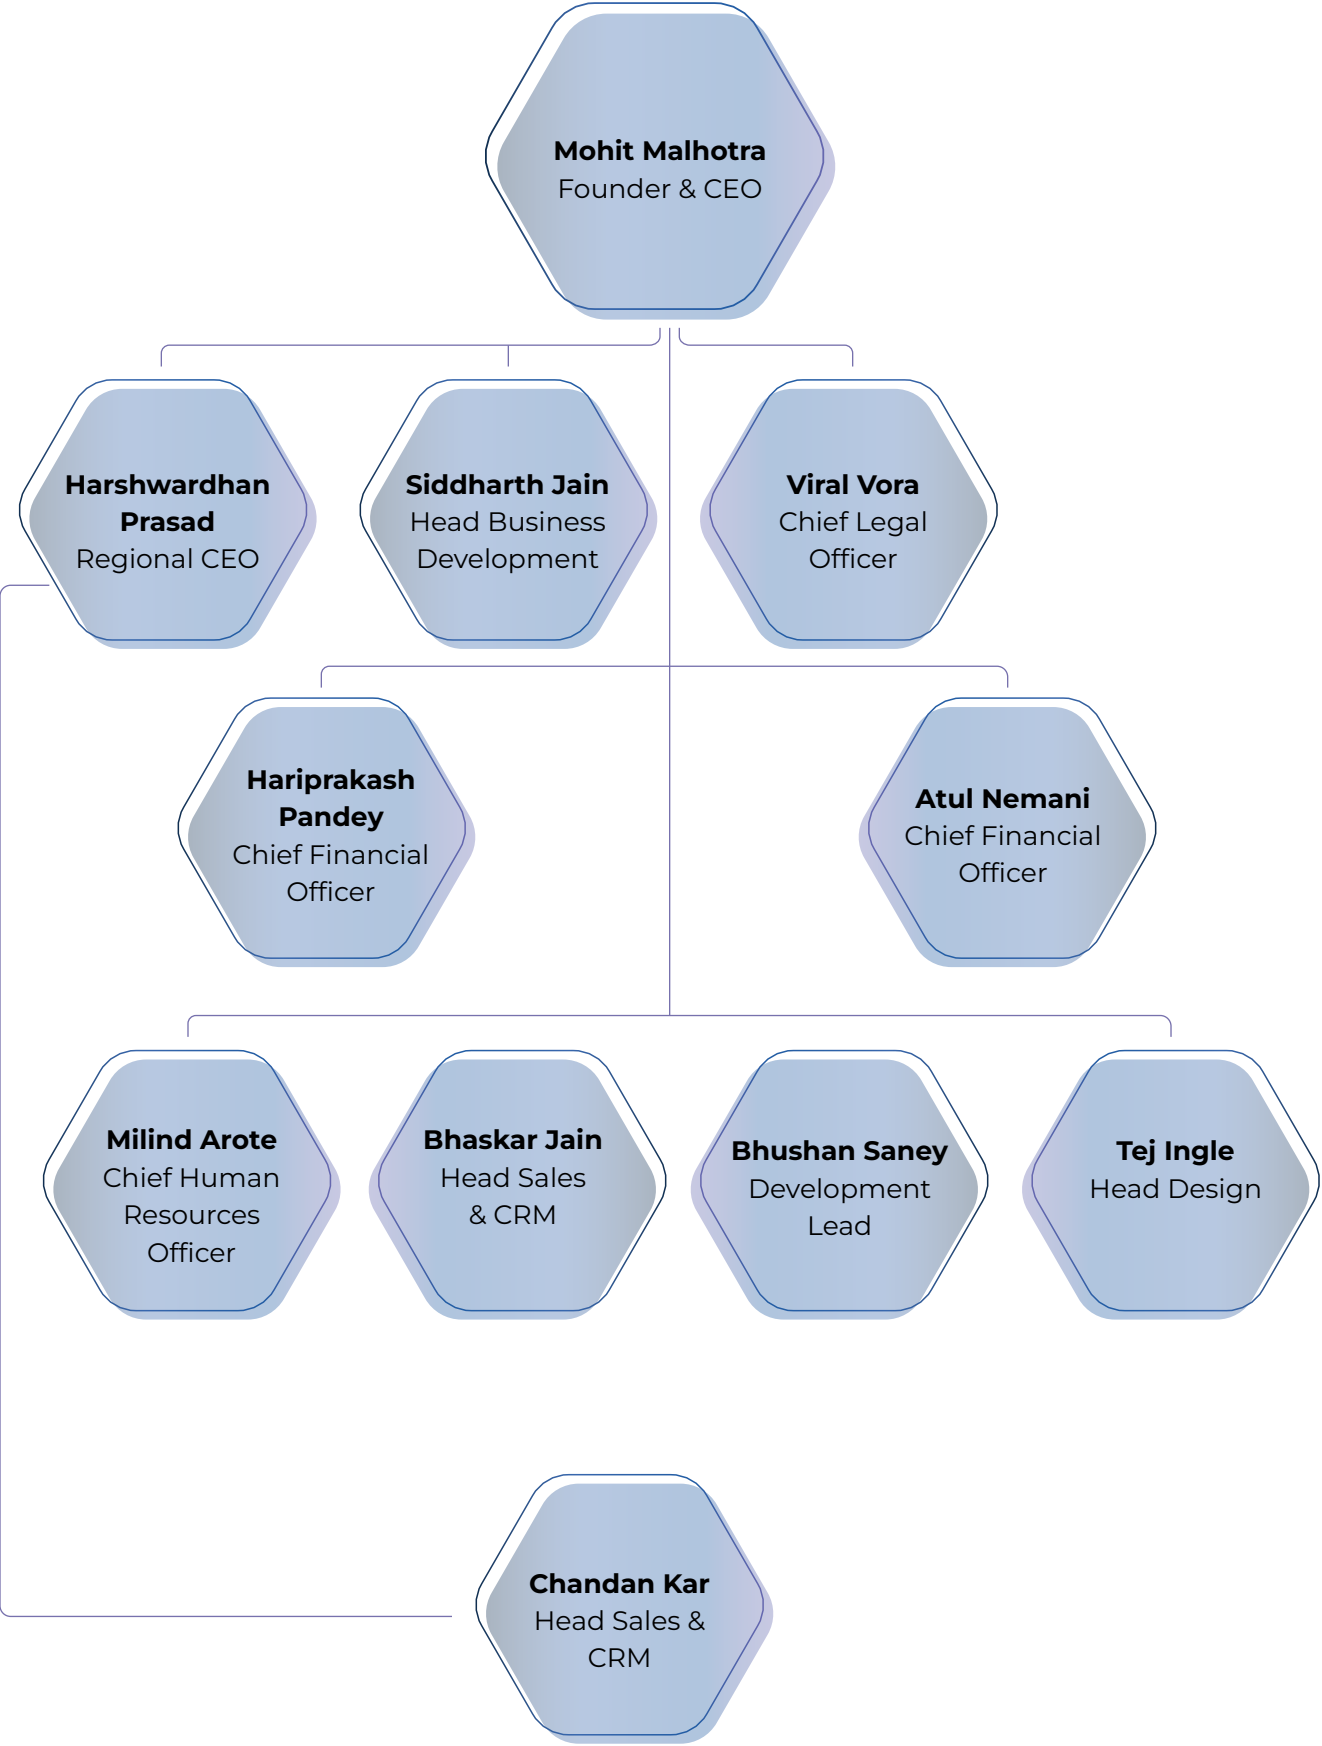

NeoLiv has established a formal three-tiered ESG governance structure to ensure ESG principles are integrated into core business practices:

- The Board, through the ESG Committee, provides strategic direction and oversight on material sustainability matters and decision-making.
- A dedicated ESG Management Committee enables the implementation of the ESG strategy across departments including Operations, IT, HR, Projects and Finance.
- The ESG Taskforce, operating at a functional level, acts as department focal points responsible for data collection, ESG standards compliance and associated reporting.

Standard operating procedures and process templates have been developed to institutionalise ESG practices. Performance is tracked through defined metrics and reviewed on a quarterly basis. Regular meetings are chaired by senior management to ensure horizontal integration across departments and vertical alignment with the Board.

Our Leadership

ESG-related Management Incentives

NeoLiv acknowledges the role of incentives in driving responsible behaviour and aligning management actions with sustainability objectives. NeoLiv embeds accountability for ESG performance directly into how its people are assessed and rewarded. ESG factors form part of the annual performance targets (Key Result Areas) of personnel across the organisation, including the Board, the C-suite and senior management, fund and portfolio leadership, and dedicated ESG staff. Performance against these ESG targets carries predetermined financial consequences where each individual's ESG-

related KRAs is assigned with a defined weight within their annual performance scorecard, and that scorecard directly determines the variable pay / performance bonus payable for the year. The weighting and the linkage to variable remuneration are fixed at the start of each performance cycle, so that under-achievement against ESG targets reduces variable-pay outcomes proportionately. This structure ensures responsibility for ESG and sustainability commitments is shared from the boardroom to functional teams and reinforced through tangible reward outcomes.

Corporate Policies

NeoLiv's governance framework is supported by a suite of Board-approved corporate policies, embedded into operational workflows through standard operating procedures and compliance checklists. All policies are reviewed regularly, and employees are trained on policy requirements through induction programmes, online learning modules and periodic refresher courses.

Policy	Description
Code of Conduct	Defines ethical standards and professional behaviour applicable to all employees, agents, contractors and third parties.
Human Rights Policy	Establishes guiding principles for respecting and protecting human rights across all operations and the value chain.
ESG Policy	Guides the integration of ESG considerations into business decision-making; upholds the highest standards of environmental and social conduct.
Data Protection & Privacy Policy	Sets standards for information systems use and data sharing to protect confidentiality and stakeholder data integrity.
Health, Safety & Environment (HSE) Policy	Governs health, safety and environmental stewardship across all construction sites and operational facilities.
Grievance Handling Policy	Provides a transparent and fair process for employees and stakeholders to raise and resolve grievances.
Supplier Code of Conduct	Framework for suppliers to conduct business in alignment with NeoLiv's ESG and environmental management standards.

Risk Management

NeoLiv's risk management framework is an integral part of its corporate governance mechanism, designed to safeguard assets, reputation, business continuity and stakeholder value. The approach addresses both traditional and emerging risks, including those posed by climate change, technology and ESG non-compliance.

The risk management system is aligned with national and international standards to facilitate risk identification, assessment, monitoring and mitigation at both corporate and project levels.

The Company employs digital tools for real-time tracking and maintains escalation protocols for rapid response. Risk mitigation strategies include insurance, contractual risk-sharing, redundancy measures and regulatory liaisons. Risk governance is overseen by the Board, with operational responsibility resting with department heads.

Risk assessment at NeoLiv is treated as a precondition for growth rather than a constraint on it. Every transaction is evaluated across four domains:

Capital and deal risk, including minimum IRR and margin hurdles, downside stress tests on pricing, sales volumes and execution timelines, and location within pre approved micro markets;

Product and delivery risk, covering cost variance to budget, protection of core specifications in a downturn, quality benchmarks defined before launch and audited at handover, and a maintenance cost structure that preserves resident value;

Sales and launch risk, including value versus price validation before pricing is fixed, presales thresholds before construction begins, distribution depth and weekly absorption tracking against underwriting; and

Financial and Governance risk, comprising strict leverage ceilings at SPV and entity level, maintenance of liquidity reserves, cross default protections and zero tolerance for unclear approvals or regulatory exposure.

Ethical Business Conduct

Ethical conduct is non-negotiable at NeoLiv. The Company’s Board-approved Code of Conduct and Grievance Handling Policy govern all employees and business associates.

Concerns can be escalated from reporting manager (5 days) → Business/Functional Head (7 days) → HR/CHRO/CEO (5 days) or raised via the ESG Taskforce.

All confirmed breaches are addressed through

a graduated disciplinary framework. In FY 2025-26: zero corruption incidents (GRI 205-3); zero anti-competitive legal actions (GRI 206-1). All employees undergo mandatory ethics and compliance training. A secure and anonymous grievance redressal mechanism is in place, with zero tolerance for any breach of the Code of Conduct. A Whistleblower Policy ensures that employees and stakeholders can report concerns anonymously through secure channels without fear of retaliation.

Ethics & Anti-Corruption Indicator (GRI 205-3, 206-1)	FY 2025-26 Value
Confirmed incidents of corruption (GRI 205-3a)	0
Employees dismissed / disciplined for corruption (GRI 205-3b)	0
Contracts terminated due to corruption violations (GRI 205-3c)	0
Public legal cases regarding corruption (GRI 205-3d)	0
Legal actions - anti-competitive behaviour (GRI 206-1a)	0
Completed legal actions - outcomes (GRI 206-1b)	0
Anti-corruption policies communicated to employees	100%

Note: Reported data may change following the publication of the assurance report.

Regulatory Compliance

Regulatory compliance is fundamental to NeoLiv’s operations. The Company is compliant with all relevant and applicable laws and regulations. A dedicated compliance committee monitors regulatory developments, maintains compliance registers, ensures timely filings and supports internal audits. All compliance obligations are mapped by function, with SOPs developed for licensing, permits and approvals. The Board regularly reviews compliance reports and oversees the mitigation of any non-compliances identified.

Responsible Branding

NeoLiv ensures all branding and marketing communications are aligned with legal and compliance requirements to avoid misleading claims or violations of advertising standards. Regular customer feedback is incorporated into brand positioning to ensure that communications remain transparent, credible and stakeholder centric.

Supply Chain Management

NeoLiv recognises that its suppliers’ environmental and social footprint is an extension of its own ESG performance. In FY 2025-26, 100% of new suppliers were screened against environmental and social criteria (GRI 308-1, 414-1). Three suppliers were formally assessed; none identified as having significant negative impacts. No contracts terminated on ESG grounds.

Key principles guiding NeoLiv’s supply chain management approach include:

- Preference for green-certified products (e.g., FSC-certified wood, low-VOC paints).
- Inclusion of micro, small and women-owned enterprises.
- Local sourcing to reduce carbon footprint and promote community development.
- Lifecycle costing models to evaluate long-term efficiency.
- Avoidance of single-use plastics and hazardous substances in supplies.

Supplier and Vendor Compliance

Vendors are expected to maintain high standards of ethical conduct throughout their engagement with NeoLiv. All supplier agreements include clauses on labour laws, environmental permits, anti-corruption provisions and grievance redressal mechanisms. NeoLiv tracks vendor compliance and conducts risk assessments and screening to ensure alignment with Company principles. The Supplier Code of Conduct is being updated to further integrate sustainability and social responsibility considerations at every stage of the sourcing lifecycle.

Data Privacy and Information Security

As a modern real estate platform, NeoLiv handles sensitive customer, employee, investor and partner data. A robust Data Privacy and Information Security Framework has been developed to protect this data. Privacy measures comply with applicable laws, and personal data is collected and processed only for legitimate purposes with thorough security mechanisms in place.

NeoLiv’s information security management system encompasses governance policies, infrastructure security, user access controls and incident response, including:

- Multi-Factor Authentication (MFA) enabled for all M365 accounts.

- Mobile Device Management (MDM) using Scalefusion for laptop and phone access control.
- Security Operations Centre (SOC) implementation with BSE M-SOC BluSapphire for threat monitoring and response.
- Vulnerability Assessment and Penetration Testing (VAPT) scheduled and executed by certified third-party auditors.
- Role-based access controls and audit trails governing access to personal information.
- All customer-facing platforms including booking portals, mobile apps and CRM systems secured with encryption and regular threat monitoring.

Information Security Management

In the event of a suspected breach, NeoLiv’s Incident Response Team investigates the root cause, notifies affected individuals as required by applicable law and initiates remediation steps. Customer data requests and privacy complaints

are handled through a dedicated data privacy officer and grievance mechanism. Internal audits and regular security patching ensure that systems remain secure, up-to-date and resilient against emerging threats.

Disaster Resilience

NeoLiv’s Disaster Resilience Framework integrates business continuity planning (BCP), emergency preparedness, crisis communication and post-event recovery. Identified risks include natural disasters (floods, earthquakes), cyberattacks, data loss, supply disruptions and health pandemics.

Business Continuity Plans (BCPs) maintained for each function and site include:

Backup power systems and data recovery servers.

Alternate supplier contracts and logistics contingency planning.

Site-level evacuation protocols and health kits.

Cloud-based access to project documentation and customer records.

Communication templates and designated crisis response teams.

Mock drills are conducted regularly, and emergency preparedness is reviewed quarterly. Insurance coverage is in place for property, liability and cyber incidents. NeoLiv’s strategy also incorporates climate adaptation measures into building design and infrastructure planning.

GRI Content Index

This report has been prepared with reference to the GRI Standards 2021. The table below provides a summary index of key GRI disclosures and their location within this report.

GRI Disclosure	Description	Location / Status

SDG Alignment

NeoLiv’s ESG strategy and material topics are aligned with the following United Nations Sustainable Development Goals (SDGs):

GRI Disclosure	Description	Location / Status
	Good Health and Well-Being	Occupational Health & Safety; Health and Wellbeing of Residents
	Quality Education	Employee Training and Development
	Gender Equality	Diversity, Equity and Inclusion
	Clean Water and Sanitation	Water Management
	Affordable and Clean Energy	Energy Management; Renewable Energy
	Decent Work and Economic Growth	Employee Welfare; Human Rights
	Industry, Innovation and Infrastructure	Green Building; Climate-Resilient Infrastructure
	Reduced Inequalities	Human Rights; DEI
	Sustainable Cities and Communities	Green Building; Community Wellbeing
	Responsible Consumption and Production	Waste Management; Operational Eco-efficiency
	Climate Action	Climate Strategy; GHG Emissions Management
	Life on Land	Biodiversity
	Peace, Justice and Strong Institutions	Corporate Governance and Business Ethics
	Partnerships for the Goals	Stakeholder Engagement; Supply Chain Management

Glossary of Terms

NeoLiv’s ESG strategy and material topics are aligned with the following United Nations Sustainable Development Goals (SDGs):

Term / Acronym	Definition	Term / Acronym	Definition
AQI	Air Quality Index	KRA	Key Result Area
BCP	Business Continuity Plan	LEED	Leadership in Energy and Environmental Design
CEA	Central Electricity Authority (India)	LTIFR	Lost Time Injury Frequency Rate
CDM	Clean Development Mechanism	MFA	Multi-Factor Authentication
CO ₂ e	Carbon Dioxide Equivalent	MMR	Mumbai Metropolitan Region
DE&I	Diversity, Equity and Inclusion	NCR	National Capital Region
DG Set	Diesel Generator Set	NPS	Net Promoter Score
EDGE	Excellence in Design for Greater Efficiencies (IFC green building standard)	OHS	Occupational Health and Safety
